SOLAR CARPORT

Solar carports are structures that provide shade to parked cars while also harnessing solar energy through the use of solar panels installed on the roof. They are typically constructed using sturdy material such as aluminum and are designed to withstand the weight of solar panels and other environmental factors.

The solar panels installed on the carport roof capture sunlight and convert it into electricity, which can be used to power the carport's lighting, electric vehicle charging stations, or even feed the surplus energy back into the grid.
